

COLIN PETER FAIRHURST (1942-1994): BIBLIOGRAPHY OF WORKS ON MYRIAPODA.

Compiled by Paul T. Harding

Biological Records Centre, Institute of Terrestrial Ecology, Monks Wood, Abbots Ripton, Huntingdon, PE17 2LS.

At the time of his death in December 1994, Colin Fairhurst (see Obituary in *Bulletin of the British Myriapod Group* 11, 1995) had produced 14 titles relating to myriapods, including his Ph.D. thesis and an unpublished but widely circulated summary of millipede records. Four titles are derived mainly from the research carried out for his Ph.D., nine are concerned with the Myriapod Survey and Millipede Recording Scheme and one, on poisonous exudates, is a review of a topic in which he had a continuing interest. Six papers were published in the proceedings of successive International Congresses of Myriapodology.

By running the Millipede Recording Scheme from 1971 to 1983, and identifying many thousands of specimens for others, Colin made a most important contribution to another publication, the Preliminary Atlas (British Myriapod Group, 1988, *Preliminary atlas of the millipedes of the British Isles*. Huntingdon, Biological Records Centre).

I have been unable to trace evidence for a book chapter on *The life cycles of Myriapoda* referenced as being 'in press' in one of his personal papers from 1993, and the publishers listed in the reference have no knowledge of the book (*The reproductive biology of the Arthropoda*) in which it is listed as being in press. I should be pleased to hear if anyone comes across this chapter or book.

Off prints of some of these papers (marked *) are available from me on request: a large stamped self-addressed envelope would be appreciated with any request.
